# Smart + Green Ports

Guy Barkley
CEO & Founder
guy@atmotech.co.uk

# 1. Introduction

- What we do, Our team

### **Asset Optimisation**

Generate a return on investment by identifying inefficiencies

### Health & Safety

Minimise exposure and protect your staff

### **Environmental Data**

Understand sources of emissions and root causes

### Decarbonisation

Tools to inform a cost effective roadmap to decarbonise

## Team

**Guy Barkley** Founder & CEO

**Madeleine Muir** COO

Carla Pires CRM

**Arayind Tumuluri** Solutions Architect

**Kieran Rafferty** 

Cristiana Veloso Commercial & Data

**Patrick Thomas** Product Development

**Sharon Heideman** 

**Head of Compliance** 

Senior Account Director

**James Dyer** Data Science

**Tobi Taiwo** Site Ops and Product Dev

Fynn O'Connor Data and Product Dev

Joe Johnson Product Dev Placement

Craig Hammock Data Science

**Chloe Groff** Product Dev Placement

### **Environment**

#### Visualise in real time

#### **Assets**

### Optimise sites and fleets

### Data

### All in one place

#### AtmoCore™

Live asset & environmental insights, all in one place.

Atmo specialises in using many different types of sensors and real-time data transmissions, providing KPIs to support efficiently run sites and to ensure a safe working environment.

#### **Emissions**

Reduce emissions by identifying root causes. Support permit and compliance requirements.

#### Staff safety

Minimise exposure and support EH40 & noise compliance = fewer sick days and a more productive workforce.

#### Decarbonisation

Rank on-site assets by emissions and determine the optimal decarbonisation strategy per £ invested.

Atmo identifies asset efficiencies which helps companies to effectively use their existing assets and advising any asset changes to increase your site's return on investment whilst controlling air quality.

#### Site & fleet

Track your assets in real time. Understand when, where and how assets are used

#### **Efficiency**

Identify under-utilised assets; reduce downtime. Optimise journeys & routing.

#### Maintenance

Enable predictive maintenance and highlight unreliable assets Atmo measures site activity and pollution to rank on-site assets by real-world emission levels, and highlight risks to staff and the environment.

#### Integrate

Save time and remove data silos, with existing and new datasets all in Atmocore.

#### Scale

From macro performance across a portfolio of sites and multiple fleets, to individual

#### **Visual & Intuitive**

Easy to digest information, track KPIs and implement change

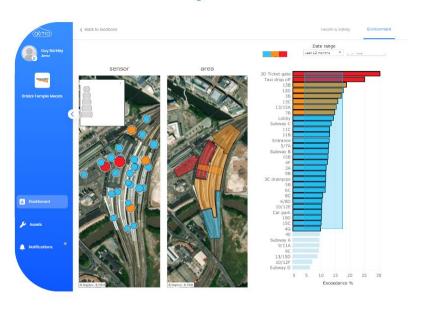

# 2. Technology

Digital twins of site, AtmoCore

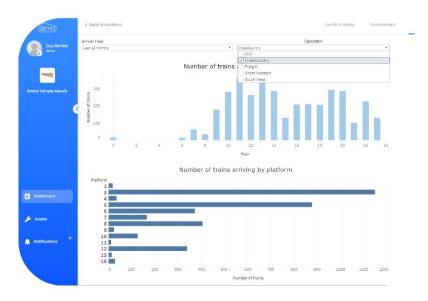

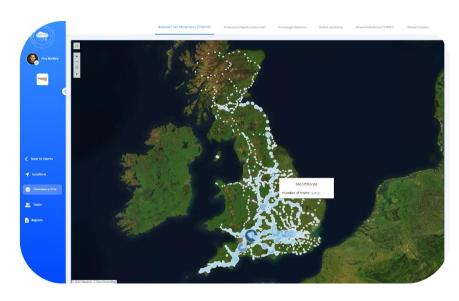

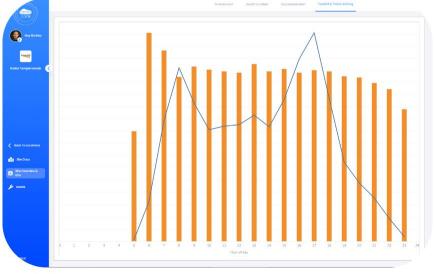

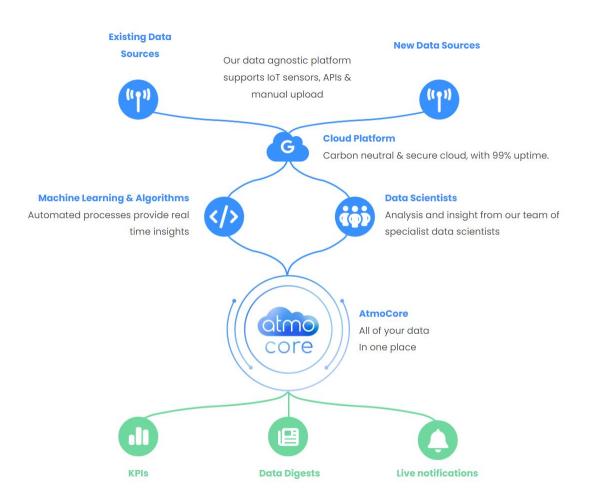

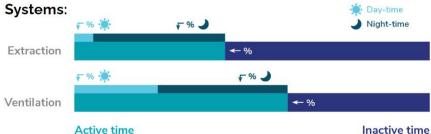

# 3. Asset Optimisation

- Smart Ports

# Assets - TOC Train Depot

# Hinkley C

Low frequency High frequency

Low frequency High frequency

### Identified

through efficient use of **on-site assets** 

### **Efficiency Increase**

on dust suppression systems

# **Smart Depots**

## Scope

Machinery (Cranes, plant etc.)

**Energy Data** 

Enviro + Safety

# 4. Safety

- Air, noise & separating people & machinery

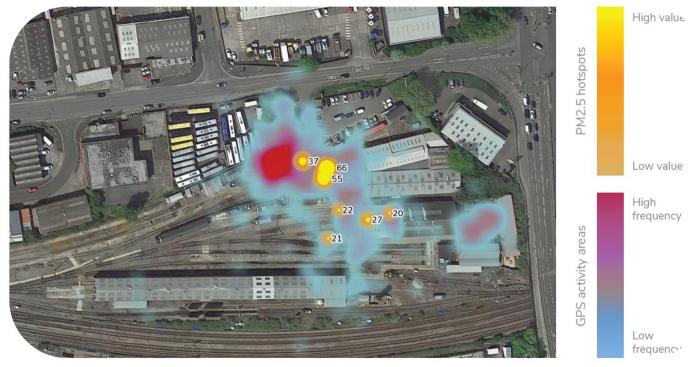

# **Assets & Air Quality**

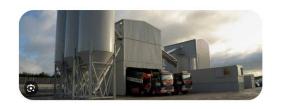

## Noise

Peak noise levels

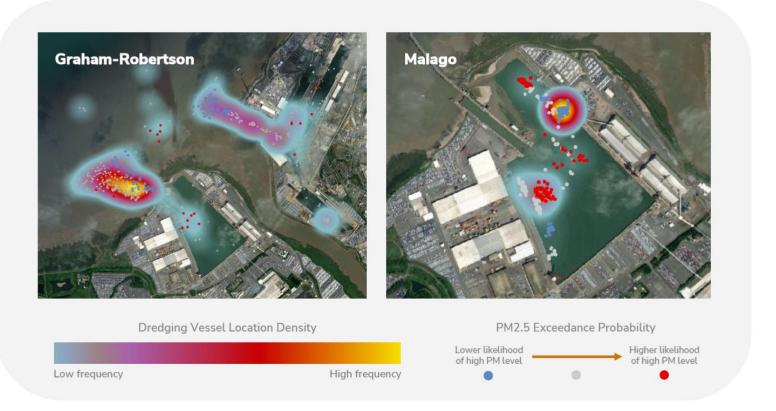

# 5. Decarbonisation

## Bristol Port - Decarbonisation

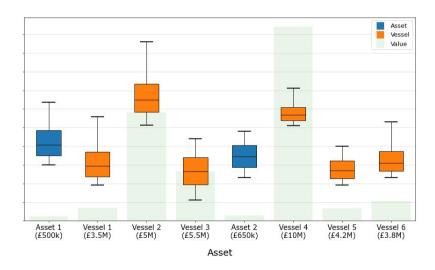

### **Identify Low Hanging Fruit**

- Compare real-world emissions
- Rank assets on-site
- BEFORE spending big money

# Q&A, Obrigado!

## Thank You

**Guy Barkley** 

CEO & Founder
